# 60 Days Internship Log Sheet – Cyber Security

| Sl No. | Date | Topics Covered / Activity Done | Signature |
|---|---|---|---|
| 1 | | Introduction to internship program and cyber security overview | |
| 2 | | Understanding importance of cyber security | |
| 3 | | Study of cyber threats and digital attacks | |
| 4 | | Analysis of real-world cyber security incidents | |
| 5 | | Understanding cyber security career opportunities | |
| 6 | | Basics of computer systems and digital infrastructure | |
| 7 | | Study of computer hardware components | |
| 8 | | Understanding operating systems and software | |
| 9 | | Identification of vulnerabilities in systems | |
| 10 | | Practical discussion on system security | |
| 11 | | Introduction to networking concepts | |
| 12 | | Understanding network devices and communication | |
| 13 | | Types of networks: LAN, WAN, MAN | |
| 14 | | Importance of networking in cyber security | |
| 15 | | Networking practical discussion and activities | |
| 16 | | Introduction to IP addressing | |
| 17 | | Types of IP addresses and subnet basics | |
| 18 | | Understanding ports and protocols | |
| 19 | | Internet fundamentals and connectivity | |
| 20 | | Understanding DNS and internet working process | |
| 21 | | Study of OSI model | |
| 22 | | Understanding TCP/IP communication model | |
| 23 | | DNS working and domain resolution process | |
| 24 | | HTTP protocol and web communication | |
| 25 | | HTTPS and secure communication concepts | |
| 26 | | Introduction to cyber threat landscape | |
| 27 | | Study of malware and malicious software | |
| 28 | | Understanding phishing and social engineering | |
| 29 | | Study of ransomware attacks and prevention | |
| 30 | | Cyber threats discussion and preventive measures | |

| | | | |
|---|---|---|---|
| **31** | | Understanding hackers and ethical hacking | |
| **32** | | Types of hackers and their activities | |
| **33** | | Cyber attack lifecycle and stages | |
| **34** | | Cyber laws and digital ethics | |
| **35** | | Information Technology Act and legal awareness | |
| **36** | | Introduction to operating system security | |
| **37** | | Understanding CIA triad principles | |
| **38** | | User accounts and trust models | |
| **39** | | Principle of least privilege | |
| **40** | | Privilege escalation and security risks | |
| **41** | | Windows security fundamentals | |
| **42** | | User Account Control (UAC) concepts | |
| **43** | | Windows firewall and filtering concepts | |
| **44** | | Importance of updates and patch management | |
| **45** | | Introduction to Linux for cyber security | |
| **46** | | Basic Linux commands and file handling | |
| **47** | | Authentication and identity verification methods | |
| **48** | | Authorization and access control mechanisms | |
| **49** | | Multi-factor authentication (MFA) concepts | |
| **50** | | Password security and system hardening | |
| **51** | | Introduction to virtualization concepts | |
| **52** | | Setup of VirtualBox and Kali Linux | |
| **53** | | Network devices: router, switch, firewall | |
| **54** | | Network security concepts and defenses | |
| **55** | | Packet analysis and Wireshark basics | |
| **56** | | Introduction to vulnerability assessment | |
| **57** | | Ethical hacking and penetration testing basics | |
| **58** | | Project topic selection and implementation | |
| **59** | | Project documentation and presentation preparation | |
| **60** | | Final project submission and internship completion | |
