CLOUD COMPUTING

90-DAY TRAINING LOG SHEET

Day	Date	Topics Discussed / Covered / Tasks	Supervisor Signature
1		Introduction to Cloud Computing and Evolution of Cloud Computing	
2		Cloud Characteristics and Benefits	
3		Cloud Service Models (IaaS, PaaS, SaaS)	
4		Cloud Deployment Models (Public, Private, Hybrid, Community)	
5		Virtualization and Hypervisors	
6		Resource Pooling, Elasticity, Scalability and Multi-tenancy	
7		Cloud Providers Overview (AWS, Microsoft Azure, Google Cloud Platform, OCI)	
8		Cloud Networking Basics – IP Addressing and DNS	
9		CDN, Load Balancing and Internet Gateways	
10		Revision and Practical Activities on Module 1	
11		Amazon EC2 and Compute Services	
12		Azure Virtual Machines and Google Compute Engine	
13		Cloud Storage – Object, Block and File Storage	
14		Amazon S3, EBS and EFS	
15		Virtual Private Cloud (VPC)	
16		Subnets and Route Tables	
17		NAT Gateway and Internet Gateway	
18		Security Groups and Network Configuration	
19		Identity and Access Management (IAM)	
20		IAM Users, Groups, Roles and Policies	
21		IAM Permissions and Best Practices	
22		Amazon CloudWatch	
23		AWS CloudTrail and Azure Monitor	
24		Infrastructure as Code (IaC) Concepts	
25		Practical Session – Infrastructure Provisioning	
26		Revision and Assessment of Module 2	
27		Cloud Databases – Amazon RDS	
28		DynamoDB, Cloud SQL and NoSQL Databases	
29		Web Application Hosting	
30		**Project 1:** Deploy a Virtual Machine with Storage, Networking and IAM Configuration	
31		Application Deployment Concepts	
32		Serverless Computing – AWS Lambda	
33		Azure Functions and Google Cloud Functions	
34		API Gateway and REST APIs	
35		API Integration	
36		Docker Fundamentals	

37		Docker Images and Containers	
38		Docker Hub and Container Lifecycle	
39		Cloud Development Best Practices	
40		Scalability, Availability and Fault Tolerance	
41		Cost Optimization Techniques	
42		Practical Session – Docker and Cloud Deployment	
43		Cloud Security Fundamentals	
44		Shared Responsibility Model	
45		IAM Security Best Practices	
46		Multi-Factor Authentication (MFA)	
47		Principle of Least Privilege	
48		Encryption at Rest	
49		Encryption in Transit	
50		Key Management Services	
51		Backup and Recovery	
52		Firewalls and Security Groups	
53		Network ACLs	
54		VPN and Bastion Hosts	
55		DevOps Fundamentals	
56		Git and GitHub	
57		Jenkins	
58		GitHub Actions and CI/CD Pipelines	
59		Terraform Basics and AWS CloudFormation	
60		**Project Review**	
61		Auto Scaling	
62		Elastic Load Balancer	
63		High Availability Architecture	
64		Failover Mechanisms	
65		Microservices Architecture	
66		Service Communication	
67		Kubernetes Fundamentals	
68		Amazon EKS Overview	
69		Cloud Cost Management	
70		Budgeting and Billing	
71		Resource Optimization	
72		Cloud Migration Strategies	
73		Lift-and-Shift Migration	
74		Re-platforming and Re-architecting	
75		Migration Planning	
76		AWS Well-Architected Framework	
77		Disaster Recovery	
78		Business Continuity	
79		Monitoring and Performance Optimization	
80		Project Planning and Architecture Design	
81		Cloud Infrastructure Setup	
82		Compute Service Configuration	
83		Storage Service Configuration	
84		Database Integration	

85		IAM and Security Configuration	
86		Monitoring and Logging Implementation	
87		Automated Deployment	
88		Testing, Optimization and Documentation	
89		Final Project Demonstration and Viva	
90		Final Training Assessment, Feedback and Course Completion
